

Education

Bachelor of Science in Data Science	Aug 2022 - Dec 2026
University of Michigan	Ann Arbor, MI
• Current GPA: 3.72/4.00 (University Honors) • Relevant Coursework	
Winter 2026 (Jan-Apr): Machine Learning (EECS 445), Database Management Systems (EECS 484), R Programming & Statistical Computing (DATASCI 306)	
Past: Data Structures and Algorithms (EECS 281), Applied Regression Analysis (STATS 413), Deep Learning (DATASCI 315)	

Experience

Backend AI Engineering Intern	Jul 2026 - Sep 2026
FlyRank AI	https://flyrank.ai/
• As part of the 10x.ai ecosystem, FlyRank is an AI-driven, execution-first growth platform that scales organic and AI-discovery traffic for DTC and B2B brands through end-to-end content automation. • Designed and implemented scalable server-side AI workflows, focusing on retrieval-augmented generation (RAG) and structured output pipelines. • Engineered production-ready API contracts and tool-calling workflows to ensure reliable integration between model outputs and backend services. • Developed and executed evaluation harnesses to measure AI model performance, address hallucination risks, and optimize grounding accuracy. • Architected error-handling and validation logic to maintain system stability and auditability in AI-driven product environments.	
Data Science Intern	Jun 2026 - Sep 2026
IDX Exchange	https://idxexchange.com/
• Designed and deployed scalable machine learning models (e.g. Linear Regression and Gradient Boosting) using CRMLS datasets to predict California residential property close prices based on key features like living area and lot size. • Engineered analytical pipelines to handle data exploration, preprocessing/feature engineering, and model training, which significantly improved data-driven accuracy for stakeholders. • Evaluated model performance using metrics like R² and transformed findings into visual dashboards, written reports, and presentations to support high-level strategic initiatives for internal teams and clients.	

Project

Development of Maizey Tool for Automated Assignment Grading	Oct 2025 - Jun 2026
Research Assistant	University of Michigan, College of Pharmacy
• Developed and evaluated Maizey AI grading tools to automate the assessment of open-ended scientific manuscript appraisals in the PHARMACY 604 Evidence-Based Medicine course. • Implemented prompt engineering and machine learning validation frameworks to assess grading accuracy, conducting comparative analysis between AI evaluations and human assessments to ensure pedagogical alignment and consistency. • Delivered automation solution projected to reduce GSI grading workload by 5+ hours per assignment while providing 85+ PharmD students with actionable feedback on scientific writing and critical appraisal skills.	
Test-Time Strategies for LLMs (Mentor: Ambuj Tewari)	Jan 2026 - Apr 2026
Conditional Pass@N and Search-Aligned Training	University of Michigan, Department of Statistics
• Investigated the alignment between training objectives and testing strategies to improve Large Language Model (LLM) generalization. • Explored and optimized test-time strategies, including "Best of N" and "Pass@N," to construct robust inference methods for math and coding problem sets. • Applied principles of Reinforcement Learning and LLM fine-tuning to develop and validate novel testing frameworks.	

Skills

• Programming languages: Python, C++, R, SQL, JavaScript • AI tools: Gemini, Claude, ChatGPT, Codex, Copilot, DeepSeek, Perplexity, NotebookLM, Notion AI • Software: PyCharm, VS Code, XCode, RStudio, MySQL, MongoDB, Git, Jupyter Notebook, Tableau, Microsoft Office • Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, PyTorch, TensorFlow • Languages: English, Mandarin
